

On-Boarding Workshop

Built for the Cloud

Do you currently have Azure on your Enterprise Agreement, but don't know where to start? KiZAN can assist with planning how and where to use Azure for your business as well as have you using Azure in the first day!

KiZAN's one day on-boarding workshop can help outline the steps for your organization to effectively start using Azure in your business. Our solution architects will work to identify and document the key technical issues of implementing Azure in your environment. Onboarding with Azure will include:

- Determining your business needs and how Azure can help solve them.
- Identifying how Azure can impact any current and future projects.
- Setting up the enterprise portal using your Azure EA Benefits.
- Currently on O365? We'll make use of your existing Azure Active Directory.
- Reviewing the functional areas of the portal and what Azure has to offer.

Achieve Your Ideal Environment in Azure

KiZAN's one day on-boarding workshop is the perfect service to identify the critical steps for achieving your ideal cloud environment inside Azure. KiZAN's extensive experience with Azure affords us the capability to provide our customers with advice and implementation assistance that will make your Azure Cloud experience a positive one.

If you would like additional training on Azure we do offer a 1 to 3 day boot camp that offers instruction, demonstrations, and labs.

As a Microsoft EA customer, you may be eligible to utilize Deployment Planning Service vouchers for this workshop as well. For continued Azure projects, you MAY also be eligible for Microsoft Azure funding to supplement your projects. This will depend on your enterprise agreement.
