

Highly Available Azure Based ADFS \$2,500

## High Level

### Is your Office 365 deployment only partially cloudy?

KiZAN can move your on premise Active Directory Federation Services (ADFS) and directory synchronization services to Azure! This will further reduce your on premise footprint while improving uptime for your Office 365 users that use Single Sign On (SSO).

KiZAN will move ADFS and Directory Synchronization to Azure while upgrading both to the latest versions.

- Creation of an Azure tenant, connected to your existing Office 365's Azure AD instance.
- Configuration of virtual networks and site to site VPN
- Creation of Azure Virtual Machines for the following roles in Azure:
  - Two Windows Server 2012 R2 Domain Controllers
  - Two Windows Server 2012 R2 Federation Servers
  - Two Windows Server 2012 R2 Web Application Servers (WAP) to act as federation proxy Servers.
- Setup of load balancing to provide fault tolerance.
- Installation of the latest Directory Synchronization for Office 365.

## Requirements

- Ability to purchase Azure services.
- External VPN concentrator or firewall that will support connecting to a Windows server 2012/2012 R2 with a public IP address
- Your AD domain functional level must be at Windows Server 2003 native.
- A valid SSL certificate for use with Federation Services, we may be able to use your existing certificate.

## Ask us about Optional Service enhancements!

- Creation of custom graphics to make your ADFS site look spectacular and match your corporate look and feel.
- Implementation of Azure Active Directory Premium including the following:
  - Self Service Password reset for users.
  - Three factor authentication
  - Workplace Join for non-domain connected workstations
