Azure
is The New Bacon
Cloud for Business

Azure is the New Bacon™ because Azure is similar to the crispy and savory treat but without any of the unhealthy traits. For example, like bacon, Azure can be broken into smaller bits! Spread Azure around your enterprise applications like bacon bits over a salad. Only using what you need when you need it. Check out our microsite, **www.AzureIsTheNewBacon.com**.

Why Azure?

Microsoft Azure is an open and flexible cloud platform that lets you quickly build, deploy and manage applications across a global network of Microsoft-managed datacenters.

- **Open.** Azure provides a set of cloud services that allowed New Signature to build and deploy cloud-based applications using almost any programming language, framework, or tool.

- **Reliable.** Azure services are hosted in several datacenters spread across the globe. These datacenters are managed by Microsoft and provide expert global support on a 24x7x365 basis

- **Flexible.** Azure is the only major cloud platform ranked by Gartner as an industry leader for both infrastructure-as-a-service (IaaS) and platform-as-a-service (PaaS).

- **Scalable.** Fully automated self-service platform that allows you to provision resources within minutes. Elastically grow or shrink your resource usage based on demand.

The Cloud for Modern Business

You can move faster, save money and integrate on-premises apps and data.

- **On-Demand Infrastructure**
  - While the sky's the limit as far as what you can do with Azure, there are ten different solution categories where it can bring significant benefits to businesses.

- **Mobility**
  - Microsoft Azure lets you build and deploy a back-end cloud solution for your mobile device apps. Cross-platform support for developing solutions for almost any platform including Windows Phone, Windows Store, Android, Apple iOS, and HTML5.

- **Media**
  - Give your business a global media presence. You can quickly build end-to-end media workflows using services from both Microsoft and its Media partners.

- **Web**
  - A robust and secure platform for giving your business website a global presence:
    - Support for both SNI and IP-based SSL certificates.
    - Securely store your website's business data, NoSQL Tables, BLOB storage.

Infrastructure & systems

Disaster Recovery Plan Deployment

Microsoft Azure Site Recovery Manager has the ability to help you streamline your disaster recovery planning, deployment and testing.

Active Directory Federation Services

KiZAN can move your on premise Active Directory Federation Services (ADFS) and directory synchronization services to Azure!

On-Boarding & Planning Workshop

We can assist with planning how and where to use Azure for your business as well as have you using Azure in the first day!

Mark Gordon is the Cloud Architect at KiZAN. He has been helping companies solve business problems with Microsoft technology since 1990. After 14 years working for Microsoft, he left in 2010 to help companies take advantage of Office 365 and Windows Azure.

Custom application development

Visual Studio Team Services

KiZAN can help migrate your on-premises Team Foundation Server to Microsoft's cloud-hosted Visual Studio Team Services (VSTS), let your team share code, and track work.

360° Application Insights

Visual Studio Insights gives product owners, development teams, and operations staff powerful insights for any app or service by streaming real-time app telemetry to Azure.

Analyze and Visualize Your Data

Azure and PowerBI provide a complete set of services for data analytics from data processing through visualization, for developers, IT professionals, and business users.

Mike Branstein is the lead of the Custom Application Development practice at KiZAN, providing vision and leadership, and expertise in software architecture, design, and application life cycle management, serving as a technical visionary, choosing products to use and defining best practices and procedures.

Why Azure?

Open

Microsoft Azure provides a set of cloud services that allowed New Signature to build and deploy cloud-based applications using almost any programming language, framework, or tool.

Reliable

Microsoft Azure services are hosted in several datacenters spread across the globe. These datacenters are managed by Microsoft and provide expert global support on a 24x7x365 basis.

Flexible

Azure is the only major cloud platform ranked by Gartner as an industry leader for both infrastructure-as-a-service (IaaS) and platform-as-a-service (PaaS).

Scalable

Fully automated self-service platform that allows you to provision resources within minutes. Elastically grow or shrink your resource usage based on demand.

Check out our latest offers

Azure 1-day On-Boarding

Do you currently have Azure on your Enterprise Agreement, but don't know where to start? KiZAN can assist with planning how and where to use Azure for your business as well as have you using Azure on the first day!

Azure Quickstart

You have purchased Azure licensing but haven't got around to using it, or you want to make the most of your Azure subscription, then this Quickstart is for you!

Gain a clearer understanding of how Azure maps to your existing IT services. This offer includes: Azure Briefing and Service Planning for 1-2 days, Azure POC/Pilot build out for 3-5 days and an Azure Governance Workshop for 3-5 days.

Azure ADFS

Is your Office 365 deployment only partially cloudy? KiZAN can move your on-premise Active Directory Federation Services (ADFS) and directory synchronization services to Azure! This will further reduce your on-premise footprint while improving uptime for your Office 365 users that use Single Sign On (SSO).

Azure Site Recovery

Disaster Recovery (DR) can be an overwhelming task for both small and large organizations. It's a huge expense and time consuming.

Microsoft Azure Site Recovery Manager makes it simple. With pay-as-you-go pricing you only pay for the resources you use. With near real-time replication, up to every 30 seconds, there's minimal data loss as well as a lower time to recover because there is no backup to restore and test.
