

# Azure Quickstart Planning & Deployment

## Could this be you?

- You have purchased Azure licensing, but it is not yet being used.
- You are currently evaluating Azure for Disaster Recovery, development, or infrastructure needs.
- You have implemented Azure, but you are looking to expand and need more assistance with governance or automation.

If you find your company falling into any of the above scenarios, KiZAN can assist you in your next steps! Let's dive deeper into the benefits of Azure as well as determine if it is the right move for you!

### Benefits of implementing an Azure Quickstart:

- A clearer understanding of how Azure maps to your existing IT services.
- Identification of specific services to pilot in Azure.
- A plan for evaluating Azure suitability for these services.
- A working POC/Pilot environment for a single workload/service.

## Azure Quickstart includes:

- **Azure Briefing and Service Planning for 1-2 days:**
  - Explore all Azure services.
  - Map Azure services to your workloads and opportunities.
  - Prioritize workloads that can move to Azure.
  - Plan for evaluating and deploying Azure on specific workloads.
- **Azure POC/Pilot build out for 3-5 days:**
  - This will be per service/workload.
- **Azure governance workshop for 3-5 days:**
  - Plan integration of Azure into your governance model.
    - Security
    - Operations
    - Management
    - Self-Service
  - Phased approach for delivering Azure services.

\*The Azure Quickstart is customizable to your needs!\*
